

A schematic diagram of a medical device, likely a catheter or probe, showing its internal components and a cross-sectional view. The device has a long, thin shaft (20) with a handle (30) at the top. A cross-section (A-A) is shown at the bottom, revealing internal components: a central tube (12) with a valve (13) and a side tube (14) with a valve (15). A dashed line (18) indicates a fluid path, and a curved tube (19) is shown at the bottom. Labels 40 and 42 point to specific components near the handle.
